

Through Wind, Thunder, Rain or Hail

Will you be the one
with the
“Power On”?

Disaster Preparedness Program

The most important thing you can do is to be prepared when the lights go off.

- √ You've developed and implemented your Disaster Preparedness Plan
- √ You've collected your Survival Kit to include supplies for 3 to 7 days.
- √ You've purchased a Standby Generator to use when the power is off.

Contaminated Fuel
Sample

We're ready right? Well maybe.

- √ Have you tested your Standby Generator to ensure that it is working properly? You don't want to wait until you need it to find out it's not working.

Like your vehicle, home, and boat your Standby Generator needs routine maintenance and inspection. The fuel supply is essential to the proper operation of your equipment. Your fuel tank can be attacked by microbial contamination (bugs) that form thick black or brown slimy mats that plug fuel filters, and corrode tanks from the inside out. There are over three hundred types of bugs and they can enter your fuel system through many different ways; and small amounts of water—condensation is enough for them to grow very well.

Having spent a lot of money on your new emergency back-up system you will want to keep it in the best operating condition and running like new. Starting a Fuel System Maintenance Program consisting of **Micro-Gard 4000**, fuel biocide to kill bugs (fungus and bacteria) and **LTSA-35A**, fuel stabilizer from the start will help insure that your system is ready when the lights go out.

Fuel Quality Services, Inc. specializes in solving fuel and fuel system related problems. We can also provide fuel analysis, fuel test kits and consultation services. We provide "turn key" service for emergency back-up fuel systems. Call FQS now before the next big hurricane or disaster comes your way and you are left without power.
